

Platinum Series Servo Controller

The ultimate in precision, power and reliability for the most demanding production environments. It features top of the line digital servo drives for reliable precision, a high voltage bus for power and speed and an optional integrated touch screen PC.

- Powers the ultimate in speed and torque with a 200-480 3-phase VAC (280-680VDC) voltage bus delivering 6A continuous, 18A peak current per channel
- Sinusoidal PID control loop for extremely smooth, accurate motion
- Up to 6 axes of motion
- In application auto-tune takes the guesswork out of precision tuning
- Runs a wide range of servo motors
- Up to 32 optically isolated inputs, 32 digital outputs, 2 analog inputs and 2 analog outputs
- 3 models available
 - Open frame sub-panel
 - IP 55 sealed enclosure
 - IP 55 sealed enclosure with computer, waterproof keyboard and touch screen monitor (coming soon)
